The map displays a network of 36 numbered points (1-36) connected by green lines. The points are distributed across the map, with some clusters and others isolated. A red line runs diagonally from the top left towards the center. A black line with white dots follows a path through the green network, starting near point 1 and ending near point 36. Major roads are shown in black, including US Highway 146 and Interstate 24. Water bodies are shown in blue, including Bell Pond, Mill Creek, Johnson Creek, George Creek, and Bay Creek. The map also shows a grid of red lines and a black line with white dots.
