Statement

General

SET OUT YEAR AND LEAF YEAR

The SET OUT YEAR for APH reporting purposes is the actual calendar year for acreage planted before July 1st. For acreage planted on or after July 1st, the SET OUT YEAR shall be the year following the calendar year in which set out actually occurred.

To determine LEAF YEAR subtract the set out year from the calendar year of insurance (or APH crop year for the yield substitution purposes), then add one year.

The production reporting date will be the acreage reporting date.

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

Type

- *4 Freeze is not a cause of loss for vinifera grapes if recognized cultural practices are not followed to prevent trunk injury or death, for example: hilling-up of graft unions in the Fall and de-hilling in the Spring, or maintaining two or three trunks, as opposed to a one trunk training system.
- *5 Insurable age of vines: Fourth growing season after being set out for all Native varieties.
- *6 Insurable age of vines: Fifth growing season after being set out for all Hybrid varietals.
- *7 Insurable age of vinifera vines: Seventh growing season after being set out for vinifera grape varieties. Written Agreement requests may be considered by the Raleigh Regional Office for blocks of grapes added to an existing unit, of the same variety, with vines less than seven growing seasons if the inspection is favorable.

Practice

- *8 Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.
