#### Statement

##### General

##### SET OUT YEAR AND LEAF YEAR

The SET OUT YEAR for APH reporting purposes is the actual calendar year for acreage planted before July 1st. For acreage planted on or after July 1st, the SET OUT YEAR shall be the year following the calendar year in which set out actually occurred.

To determine LEAF YEAR subtract the set out year from the calendar year of insurance (or APH crop year for the yield substitution purposes), then add one year.

The production reporting date will be the acreage reporting date.

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

##### Type

- \*4 Insurable age of vines: Fourth growing season after being set out for all Native varieties.
- \*5 Insurable age of vines: Fifth growing season after being set out for all Hybrid varieteis.

## Special Provisions of Insurance

### 2011 and Succeeding Crop Years

Year: 2011      Commodity: Grapes (0053)  
Date: 8/20/2010      Plan: APH (90)

State: New York (36)  
County: Erie (029)

#### **Practice**

- \*6      Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.
