Highbush 002		Organic(Certified) Non-Irr. 713 *6		
Highbush 002		Organic(Transitional) Non-Irr. 714 *6		

### Statement

#### General

##### SET OUT YEAR AND LEAF YEAR

The Insurable Age of the bushes will be the third growing season after being set out.

The SET OUT YEAR for APH reporting purposes is the actual calendar year for acreage planted before March 15th. For acreage planted on or after March 15th, the SET OUT YEAR shall be the year following the calendar year in which set out actually occurred.

To determine LEAF YEAR subtract the set out year from the calendar year of insurance (or APH crop year for the yield substitution purposes), then add one year.

If any production from any unit will be marketed directly to the consumer (without the intervention of a wholesaler, retailer, packer, processor, shipper or buyer), a pre-harvest crop appraisal is required. Notification to us must be provided at least 15 days before harvest begins. This requirement may be waived, in writing by the Regional Office, based upon evidence that acceptable supporting documentation is being maintained as required in the Crop Insurance Handbook.

A basic unit, as defined in section 1 (Definitions) of the Basic Provisions, may be divided into more than one optional unit by type (Rabbiteye or Highbush). For each optional unit, you must maintain written, verifiable records of planted acreage and harvested production for at least the previous crop year and file production reports based on those records to obtain a production guarantee.

Optional units will be determined when a timely filed acreage report is submitted and will not be subject to further division. Final unit determination will be made when adjusting a loss; however, no further division will be made at that time.

The production reporting date will be the acreage reporting date.

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

**Special Provisions of Insurance**  
**2011 and Succeeding Crop Years**

Year: 2011

Commodity: Blueberries (0012)

State: Mississippi (28)

Date: 8/20/2010

Plan: APH (90)

County: Lamar (073)

**Practice**

- \*6 Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.

**Quality**

In accordance with section 10(d) of the Blueberry Crop Provisions production to count for blueberries with 20 percent or greater damage will be determined as follows: If the damaged blueberries are harvested and sold, divide the price per pound received (minus \$0.15 per pound for harvesting) by the maximum price election for the county to determine the quality factor (not less than zero). Multiply the quality factor by the pounds of damaged production to determine the production to count for such damaged production. If the damaged blueberries are unharvested or are harvested but not sold, the production to count will be zero.
