Statement

General

SET OUT YEAR AND LEAF YEAR

The SET OUT YEAR for APH reporting purposes is the actual calendar year for acreage planted before July 1st. For acreage planted on or after July 1st, the SET OUT YEAR shall be the year following the calendar year in which set out actually occurred.

To determine LEAF YEAR subtract the set out year from the calendar year of insurance (or APH crop year for the yield substitution purposes), then add one year.

The production reporting date will be the acreage reporting date.

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

Practice

*4 Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.

Price

In accordance with section 3(d) of the Grape Crop Provisions, the price election may be the contract price (the price that will be paid per ton without premiums or discounts) minus the dollar harvest costs. Further, if more than one contract price exists, the established price election will be the weighted average for all adjusted contract prices. However, in no case will the price be greater than 1.5 times the published price election for the applicable grape type/variety. Grapes may be insured using the contract price only if:

- 1) a written contract is in effect between the producer and a winery or a processor for the current crop year;
- 2) the contract states amount that will be paid per ton and number of tons or acres contracted;
- 3) a copy of the contract(s) is provided to us no later than the acreage reporting date;
- 4) all production from insurable acreage of the variety must be grown under a grape contract; and
- 5) acreage is insured at additional coverage levels of insurance.

The dollar harvest costs are \$150 per ton for hand harvested production and the dollar harvest costs are \$70 per ton for machine harvested production.

Insurance Availability

Insurable age of vines: Fourth growing season after being set out.

Special Provisions of Insurance
2011 and Succeeding Crop Years

Year: 2011 Commodity: Grapes (0053)

County: Washington (087)

- *7 In addition to the Grape Crop Provisions requirements of insurability, Pinot grapes shall be insurable as Pinot Noir only if:
- 1) the grapes are properly and timely pruned for the purposes of producing a Pinot varietal wine; and
 - 2) the majority of Pinot tonnage was utilized for the production of a varietal Pinot wine in at least two of the previous three crop years.

Failure to comply with either of these conditions will result in the Pinot grapes being insurable as Pinot Noir for Sparkling.
