Whites 079 *2		Organic(Certified) Irr. 702 *3		
Whites 079 *2		Organic(Transitional) Irr. 712 *3		

### Statement

#### General

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

#### Type

- \*2 Recommended and adapted yellow skinned varieties such as Yukon Gold, will be considered insurable as the white type and will be designated as the white type for the purposes of this policy.

#### Practice

- \*3 Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.

#### Insurance Availability

Insurance will not attach to any acreage on which potatoes were planted the preceding crop year unless authorized by written agreement; however, potatoes will be insurable any two of the first three years on land that has not been previously planted to potatoes. Contact your crop insurance agent for specific information.

#### Quality

With regard to Grade Inspections and the respective U.S. Grade Standard (i.e. Processing, Chipping, Seed and all other Potatoes), the only size modifications recognized are those instituted by State or Federal Marketing Orders.
