Statement

General

SET OUT YEAR AND LEAF YEAR

The SET OUT YEAR for APH reporting purposes is the actual calendar year for acreage planted before July 1st. For acreage planted on or after July 1st, the SET OUT YEAR shall be the year following the calendar year in which set out actually occurred.

To determine LEAF YEAR subtract the set out year from the calendar year of insurance (or APH crop year for the yield substitution purposes), then add one year.

In lieu of Section 24(a) of the Basic Provisions, interest will begin to attach on unpaid premium on the first of the month following the first billing date provided that a minimum of 30 days have passed from the first billing date.

Rain Protection Option: Applicable only to acreage with late harvest table grape types, an end of insurance date of October 30 or later, that is adequately protected by a plastic cover. Adequate protection means the placement of a plastic film cover over the grape vines starting at one end of the trellis and continuing uninterrupted to the other end, securely tied down. If we determine that rain protection was not properly utilized or not properly reported, the indemnity for the unit will be reduced by the percentage of premium reduction allowed for the rain protection option. You must, at our request, provide us with records showing the purchase of rain protection for acreage on which the protection was applied.

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

Practice

- *5 Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.

Type "All Others" and types not specified in this section.	October 31
Crimson Seedless, Red Globe, Sweet Scarlet, Autumn King	November 15

Insurance Availability

Insurable age of vines: Fourth growing season after being set out. Third growing season after being grafted.

Any acreage that is interplanted with another perennial crop is insurable unless we inspect the acreage and determine that it does not meet the requirements contained in your policy.
