Statement

General

Raw sugar content percentage for use in adjusting harvested production or unharvested production that is appraised after the earliest delivery date that the processor accepts harvested production as provided in the Sugar Beet Crop Provisions: 16.2 percent.

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

In lieu of the second sentence of Section 24(a) of the Basic Provisions, for the purpose of premium amounts owed to us or administrative fees owed to FCIC, interest will start to accrue on the first day of the month following the issuance of the notice by us, provided that a minimum of 30 days have passed from the premium billing date specified in the Special Provisions.

In lieu of the section 11(b) of the Sugar Beet Crop Provisions, the maximum amount of the replanting payment per acre will be \$80.00, multiplied by your insured share.

Practice

- *5 Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.

Insurance Availability

Insurance will not attach on acreage in any crop year following discovery of rhizomania unless planted to a rhizomania resistant variety approved by the contracting sugar beet company.
