Practice

- *9 In addition to any requirements for separate ARH yields and revenues (databases) contained in the policy and in FCIC approved procedures, separate databases for certified and transitional acreage are required for any insured crop grown using an organic farming practice. Only acreage, production, and revenue history from each acreage type of the organic farming practice will be contained in the applicable database. Each database will include production, acreage, and revenue from any applicable buffer zone. Acreage, production, and revenue records of the insured crop from transitional acreage will be used to establish the certified organic approved ARH Revenue when such acreage initially qualifies as certified organic acreage. A variable T-Revenue will be used to complete the database, if required. Amounts shown on the Transitional Revenue Substitution Table and the Transitional Yield Substitution Table apply to the organic farming practice.

Date

The revenue reporting date will be the acreage reporting date.
