Statement

General

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

The insured crop will include olives grown on locations containing less than three contiguous acres of olives if such acreage: 1) Meets all other insurability requirements contained in the Crop Provisions; and 2) Will be located in the same or an adjoining section containing insured acreage that is part of the insured's olive unit.

Direct marketed olives will be insurable in this county.

Moraiolo	40.0
Pendolino	30.0
Picual	40.0
Sevillano	15.0
Taggiasca	40.0
All Other Varieties	40.0

SET OUT YEAR AND LEAF YEAR

The SET OUT YEAR for APH reporting purposes is the actual calendar year for acreage planted before July 1st. For acreage planted on or after July 1st, the SET OUT YEAR shall be the year following the calendar year in which set out actually occurred.

To determine LEAF YEAR subtract the set out year from the calendar year of insurance (or APH crop year for the yield substitution purposes), then add one year.

The rules for determining set-out year and leaf year will apply for purposes of determining the number of growing seasons after hedging, topping, dehorning, or stumping.

In lieu of the second sentence of Section 24(a) of the Basic Provisions, for the purpose of premium amounts owed to us or administrative fees owed to FCIC, interest will start to accrue on the first day of the month following the issuance of the notice by us, provided that a minimum of 30 days have passed from the premium billing date specified in the Special Provisions.

MINIMUM AGE/PRODUCTION REQUIREMENTS

Special Provisions of Insurance

2014 and Succeeding Crop Years

Year: 2014	Commodity: Olives (0501)	State: California (06)
Date: 7/25/2013	Plan: APH (90)	County: Shasta (089)

Olive Type/Practice	Minimum Number of Growing Seasons* After Setout	Minimum Production in Any One of the Most Recent Three Crop Years
Table (All Other) - SD	5	2.5 tons/acre
Table (All Other) - HD	4	2.5 tons/acre
Table (Manzanillo) - SD	5	2.5 tons/acre
Table (Manzanillo) - HD	4	2.5 tons/acre
Oil - SD	5	100 gal/acre
Oil - HD	4	100 gal/acre
Oil - SHD	3	100 gal/acre

*Leaf Years

Type

- *9 A unit (block) containing both Manzanillo and Sevillano table olives will be designated as the Manzanillo type if production of Manzanillo table olives is equal to or exceeds 90 percent of total production for the unit (block) for the most recent three crop years. All production from the unit (block) will be considered the Manzanillo type for purposes applicable to the olive crop insurance program.

If the percentage of Manzanillo production is less than 90 percent, the acreage, production records, production for loss adjustment, and all other purposes of the olive crop insurance program for the unit (block) must be reported based on the separate table types shown on the Special Provisions.

Practice

- *10 Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.

TREE DENSITY BY TYPE/PRACTICE

Olive Type	Practice	Trees Per Acre
Table (All Other)	IRR-SD	less than or equal to 100
Table (All Other)	IRR-HD	greater than 100
Table (Manzanillo)	IRR-SD	less than or equal to 100
Table (Manzanillo)	IRR-HD	greater than 100
Oil	IRR-SD	less than or equal to 100
Oil	IRR-HD	101 - 450
Oil	IRR-SHD	greater than 450
