Statement

General

SET OUT YEAR AND LEAF YEAR

The SET OUT YEAR for APH reporting purposes is the actual calendar year for acreage planted before July 1st. For acreage planted on or after July 1st, the SET OUT YEAR shall be the year following the calendar year in which set out actually occurred.

To determine LEAF YEAR subtract the set out year from the calendar year of insurance (or APH crop year for the yield substitution purposes), then add one year.

In lieu of the second sentence of Section 24(a) of the Basic Provisions, for the purpose of premium amounts owed to us or administrative fees owed to FCIC, interest will start to accrue on the first day of the month following the issuance of the notice by us, provided that a minimum of 30 days have passed from the premium billing date specified in the Special Provisions.

All varietal stands within an orchard that are over 15 years of age will require an annual field inspection unless waived by the Regional Office.

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

In addition to the requirements of section 3 of the Basic Provisions and section 3 of the Crop Provisions, reductions in acreage will be made when a decrease in plant stand is greater than ten (10) percent of the original plant stand and density for any reported insurable block, based upon damaged or removed trees (e.g., eighty-two percent stand on 10.0 acres X .82 = 8.2 acres). In any subsequent crop year, acreage adjusted in accordance with this paragraph must be retained and updated based upon any additional reduction in stand. No increase in reduced acreage can be made without the Risk Management Agency (RMA) Regional Office (RO) authorization.

Any other adjustments in accordance with section 3 of the Crop Provisions for damage (other than plant stand) that reduces total production potential from previous levels must be authorized by the RMA RO.

Practice

- *6 Acreage and production history from certified organic or transitional acreage will be contained in separate APH databases. Each APH database will include production and acreage from any applicable buffer zone. Any yearly average APH yields, for the most recent four crop years only, from the transitional acreage database will be used in place of Transitional Yields (T-yields) to establish the certified organic APH database. A variable T-yield will be used to complete the database, if required.

Date

The production reporting date will be the acreage reporting date.

Special Provisions of Insurance

2015 and Succeeding Crop Years

Year: 2015

Commodity: Peaches (0034)

State: Mississippi (28)

Date: 7/21/2014

Plan: APH (90)

County: Clarke (023)

Price

If a contract price is available as shown in the actuarial documents, you may elect to have your price election determined in accordance with the Contract Price Addendum (CPA). If the crop provisions or special provisions provide a method to determine a contract price your price election will be determined in accordance with the crop provisions or special provisions and the CPA does not apply.

Insurance Availability

Nectarines are insurable as a varietal class of peaches.

Quality

See the prices tab for the post production costs.
