Statement

General

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

In addition to the production reporting requirements in section 3(f) of the Basic Provisions, you must report, as specified in FCIC procedures, your current year's production on our form on the same basis used to establish your approved yield(s). The current year's production must be reported by one year (366 days) following the production reporting date contained in the actuarial documents. This production report will be used to meet the production reporting requirements in section 3(f) of the Basic Provisions for the following crop year, if there are no changes in the basis used to establish your approved yield. Your current year's production report is also subject to section 3(g) of the Basic Provisions.

Type

Cabbage to be marketed as coleslaw will be considered to be fresh-market cabbage and will be insurable as the fresh practice or type, as applicable.

Price

The maximum amount of the replanting payment per acre is 42 hundredweight for transplanting.

If a contract price is available as shown in the actuarial documents, you may elect to have your price election determined in accordance with the Contract Price Addendum (CPA). If the crop provisions or special provisions provide a method to determine a contract price your price election will be determined in accordance with the crop provisions or special provisions and the CPA does not apply.

*6 The maximum amount of the replanting payment per acre is 15 hundredweight for direct seeded practice.

Special Provisions

2024 and Succeeding Crop Years

Year: 2024	Commodity: Cabbage (0072)	State: Georgia (13)
Date: 4/4/2023	Plan: APH (90)	County: Colquitt (071)

Insurance Availability

Disease will not be an insurable cause of loss to any acreage planted to cabbage or any other Brassicaceae crop (e.g., cauliflower, broccoli, etc.) in either of the two previous crop years, unless the land has been properly fumigated according to approved Extension Service recommendations prior to planting cabbage.

Savoy cabbage and Chinese cabbage, including other Oriental greens, are not insurable.

Insurance will not attach to any acreage planted to cabbage or any other Brassicaceae crop (e.g., cauliflower, broccoli, etc.) which was infected the previous year with a 10 percent or greater infestation of sclerotinia. NOTE: The Brassicaceae family was formerly known as the Cruciferae or crucifer family.

Insurance will not attach to any acreage on which Clubroot was present in any of the previous 10 years unless the soil pH is 7.2 or higher at the beginning of the crop season. The soil pH must be documented with an approved soil test according to Extension Service recommendations.

Direct marketed cabbage is insurable.

You must provide written verification of acreage data from the acreage reports previously recorded for crop insurance purposes, or from the Farm Service Agency or the Extension Service, to the company representative by the time of application if you are a new insured or by the sales closing date if you are a carry-over insured. If your acreage of insurable cabbage types in this county for the current crop year exceeds 125 percent of the greatest number of acres of insurable cabbage types that you produced in this county for any one of the three previous years, your production guarantee (per acre) for the current crop year will be reduced as follows: (a) Multiply the greatest number of acres of insurable cabbage types that you produced in this county in any one of the three previous crop years by 1.25; (b) Divide the result by the number of acres of insurable cabbage types produced by you in this county in the current crop year; and (c) Multiply the resulting factor (not to exceed 1.0) by the production guarantee (per acre) for the current crop year. For purposes of this statement, a new producer is a producer who has never grown cabbage in this county. If you are a new producer or if you have not grown commercial fresh cabbage in one of the last three years and your acreage of insurable cabbage types in this county for the current crop year exceeds five acres, your production guarantee (per acre) for the current crop year will be reduced as follows: (a) Divide 5 acres by the number of acres of insurable cabbage types produced by you in this county in the current crop year; and (b) Multiply the resulting factor (not to exceed 1.0) by the production guarantee (per acre) for the current crop year. All production from your total acreage of insurable cabbage types produced in this county in the current crop year will be counted in the event of a loss. This limitation will not apply to: (a) An acreage increase of five or less acres; or (b) Any acreage of processing cabbage under contract that is insurable under the processing practice. This applies to all acreage in the county for the crop year.

Insurance will not attach on any cabbage planted to ground treated with aldicarb within the last six (6) months.
