General

CE specific plants may produce plants or plant products as stated in the definition of "specific plant" in the Crop Provisions. For specific plants sold by the count, the quantity for calculations is actual number of such specific plants. For specific plants that are harvested, and the production is sold by weight, the number of pounds is the quantity for calculations. The number of cartons or other containers must be converted to an equivalent number of pounds. [Other measures may be used for calculations as long as it can be converted to number of pounds of production.]

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

#### (6) Bulbs, Rhizomes, Corms, and Tubers

Definition: True bulbs (daffodils, tulips, hyacinths, etc.) are structurally a short stem with fleshy leaves or leaf bases that function as food storage organs during dormancy. They produce stems from the base of the bulb and survive from year to year. Rhizomes (e.g., irises) are modified stems that grow along the soil surface. Growth buds form on a rhizome for next year's leaves and flowers. The original rhizome will not reflower and in time will need to be dug out. This includes stolons which are above ground. Corms (e.g., crocus, freesia, and gladiolus) are usually short squat stems filled with food storage tissue. Cormels (baby plants separated from Corms) are included. Tubers (e.g., dahlias and some begonias) are underground roots with fleshy, food-storing parts.

À

Genera for Dried Bulbs Included: Allium, Babiana, Colchicum, Crocosmia, Crocus, Dichelostemma, Freesia, Fritillaria, Galtonia, Hyacinthus, Hyacinthoides, Hyacinthoides, Hyacinthus, Ipheion, Iris, Leucojum, Lilium, Muscari, Narcissus, Tulipa.

À

Genera for Rhizomes Included: Abutilon, Curcuma, Phyllostachys, Zingiber.

À

Genera for Corms Included: Amorphophallus, Colocasia, Gladiolus, Iridaceae.

À

Genera for Tubers Included: Amorphophallus, Apios americana, Asteraceae, Begonia, Helianthus, Solanum.

#### (7) Foliage and Tropical Plants

Definition: Foliage Plants are perennial woody or herbaceous plants with various growth habits grown for their attractive foliar attributes and primarily for use as indoor plants. Tropical plants are native to the tropical regions of world. These plants may be grown in non-tropical regions in controlled environments and intended for sale to house or building use where the climate is controlled.

Definition: This includes broadleaf evergreens, coniferous and deciduous trees and shrubs. Broadleaf evergreens are perennial woody evergreens that have leaves throughout the year. In temperate zone winters, some broadleaf evergreen may lose their leaves. Coniferous trees and shrubs have needle-like or scale-like leaves that remain on the plant for several seasons. Deciduous trees and shrub are perennial and lose their leaves seasonally. Seedlings are insurable only after growth from seed has initiated. Grafted material is insurable only after graft union has formed.

#### Insurance Availability

In accordance with section 8(i) of the Crop Provisions, industrial hemp (*Cannabis sativa* L.), as defined in the Agricultural Marketing Act of 1946 (7 U.S.C. 1621 et seq.), is the only *Cannabis* species insurable under this policy and only when grown in accordance with the regulations governing industrial hemp production on the land the industrial hemp is produced, when grown and sold with the root system attached and are not stock plants or plants being grown solely for harvest of buds, flowers, or greenery. You must comply with all applicable Federal regulations and any applicable state or tribal laws. Regardless of state or tribal law, the sale of hemp with a THC level greater than 0.3 percent will be considered the sale of a controlled substance. Controlled substances are not insurable. If the industrial hemp is produced in a state or tribal territory which has assumed regulatory responsibility for hemp production, you must comply with all requirements and provisions of the regulatory plan of that state or tribe and possess any license required by that plan. You must provide a copy of the license by the sales closing date. Industrial hemp must be produced using seed or plant cuttings adapted and appropriate for the intended use (for example, if planting industrial hemp to be harvested primarily for fiber, the seed must be adapted to fiber production). Industrial hemp that is unsalable or destroyed due to a delta-9 tetrahydrocannabinol (THC) level that exceeds 0.3 percent will be considered damaged due to uninsurable causes. You must notify us prior to destroying the industrial hemp, in accordance with section 11(a)(1) of the Crop Provisions.

**PROHIBITED PLANTS** - Any plant classified by a state or county as illegal to grow or sell in the county in which the nursery is located is uninsurable. For example, growing or selling plants classified as invasive species is illegal in many states and counties. No indemnity will be paid on any such plant.
