General

CE specific plants may produce plants or plant products as stated in the definition of "specific plant" in the Crop Provisions. For specific plants sold by the count, the quantity for calculations is actual number of such specific plants. For specific plants that are harvested, and the production is sold by weight, the number of pounds is the quantity for calculations. The number of cartons or other containers must be converted to an equivalent number of pounds. [Other measures may be used for calculations as long as it can be converted to number of pounds of production.]

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

Type

In accordance with the definition of "plant category" in the Crop Provisions, the following are insurable plant categories and their definitions. The list of genera & Category Definitions, the specific plants may display attributes of a different Plant Category depending on the location in which it is grown. In this case, use the Plant Category definitions to determine the most appropriate Plant Category.

The CP lists the plant categories insurable under CE. For convenience, these are listed below. The Plant Category definitions in these Special Provisions and in the CE Insurance Standards Handbook help to determine the most appropriate Plant Category.

CE Plant Categories List with Definitions and Genera

(1) All Cut Flowers and Greenery

Definition: Specific plants for which the stem is separated from the plant on which it was grown to be sold as flower, foliage, or other ornamental.

(6) Bulbs, Rhizomes, Corms, and Tubers

Definition: True bulbs (daffodils, tulips, hyacinths, etc.) are structurally a short stem with fleshy leaves or leaf bases that function as food storage organs during dormancy. They produce stems from the base of the bulb and survive from year to year. Rhizomes (e.g., irises) are modified stems that grow along the soil surface. Growth buds form on a rhizome for next year's leaves and flowers. The original rhizome will not reflower and in time will need to be dug out. This includes stolons which are above ground. Corms (e.g., crocus, freesia, and gladiolus) are usually short squat stems filled with food storage tissue. Cormels (baby plants separated from Corms) are included. Tubers (e.g., dahlias and some begonias) are underground roots with fleshy, food-storing parts.

Genera for Dried Bulbs Included: Allium, Babiana, Colchicum, Crocosmia, Crocus, Dichelostemma, Freesia, Fritillaria, Galtonia, Hyacinthus, Hyacinthoides, Hyacinthoides, Hyacinthus, Ipheion, Iris, Leucojum, Lilium, Muscari, Narcissus, Tulipa.

Genera for Rhizomes Included: Abutilon, Curcuma, Phyllostachys, Zingiber.

Genera for Corms Included: Amorphophallus, Colocasia, Gladiolus, Iridaceae.

Genera for Tubers Included: Amorphophallus, Apios americana, Asteraceae, Begonia, Helianthus, Solanum.

(7) Foliage and Tropical Plants

Definition: Foliage Plants are perennial woody or herbaceous plants with various growth habits grown for their attractive foliar attributes and primarily for use as indoor plants. Tropical plants are native to the tropical regions of world. These plants may be grown in non-tropical regions in controlled environments and intended for sale to house or building use where the climate is controlled.

(8) Trees and Shrubs Seedlings and Grafts

Definition: This includes broadleaf evergreens, coniferous and deciduous trees and shrubs. Broadleaf evergreens are perennial woody evergreens that have leaves throughout the year. In temperate zone winters, some broadleaf evergreen may lose their leaves. Coniferous trees and shrubs have needle-like or scale-like leaves that remain on the plant for several seasons. Deciduous trees and shrub are perennial and lose their leaves seasonally. Seedlings are insurable only after growth from seed has initiated. Grafted material is insurable only after graft union has formed.
