General

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

Corn planted on acreage following a crop that has been prevented from being planted will not be considered a cover crop and will be considered a crop planted for harvest.

Sections 17(f)(8)(i)(E), 17(f)(8)(ii), and 17(f)(8)(iii) of the Basic Provisions do not apply for the 2026 crop year. New breaking acreage will not be eligible for prevented planting coverage the initial year.

Type

- *4 Includes all spring-planted smooth green and yellow varieties of commercial dry edible peas, and other classes of dry peas grown to produce seed to be planted at a future date under a processor/seed company contract which meets all requirements of such a contract as defined in the crop provisions except the third (pricing) requirement.

Date

- *5 If you have selected the winter coverage option (WCO) for the fall planted types, the following dates applicable to your policy are specified in the ~~Options~~ ^{Options} section within the ~~Dates~~ ^{Dates} tab of the Actuarial Information Browser:
- 1) The sales closing date [applicable for both fall and spring planted types];
 - 2) The final planting date for acreage covered under the WCO and the WCO will not be applicable to acreage planted after this date; and
 - 3) The acreage reporting date for acreage of the fall planted types covered by this option.

Special Provisions 2026 and Succeeding Crop Years

Price

In lieu of the provisions in section 3(e)(1) of the Basic Provisions that govern additional price amounts, we may provide an additional projected price for those types where the Dry Pea Revenue Endorsement does not offer coverage for price movement. For spring types, the additional projected prices will be announced concurrently with the projected prices for those types where the Dry Pea Revenue Endorsement offers coverage for price movement, or in the case of fall types no later than 15 days prior to the sales closing date. The additional projected prices will not be less than the initial projected prices that are made available by the contract change date. Any claim settlement and amount of premium will be based on the additional projected prices.

Contract price:

You may use a contract price to determine your insurance guarantee when a contract price code of ~~yes~~/~~no~~ exists on the Prices tab in the actuarial documents for the crop, type, and practice.

Contract price authority (i.e., rules governing the use of contract prices and the method to determine a contract price) will be found in one of the following three places, listed in priority order:

1. Special Provisions, separate from this statement, which authorizes the use of the Contract Price Addendum (CPA);
2. Crop Provisions; or
3. CPA.

When the contract price code is ~~yes~~/~~no~~ on the Prices tab for the crop, type, and practice:

1. If the Crop Provisions or Special Provisions provide the contract price authority, your price will be determined in accordance with the Crop Provisions or Special Provisions. If neither the Crop Provisions or Special Provisions provide contract price authority, your price will be determined in accordance with the CPA; and
2. The Crop Provisions or Special Provisions may only provide contract price authority for specific types or practices. When this occurs, the CPA may be used to determine a contract price for other types or practices where contract price authority is not provided through the Crop Provisions or these Special Provisions.

- *8 In lieu of the provisions in section 4(b) of the Basic Provisions that require changes in price elections to be available by the contract change date, the projected prices for spring types will be announced after the fall sales closing date but no later than November 30th of the calendar year preceding the crop year except for those types where the Dry Pea Revenue Endorsement offers coverage for price movement; these types are announced not later than the third business day of March.

Insurance Availability

- *9 In accordance with section 7(a)(3) of the Dry Pea Crop Insurance Provisions, Austrian peas interplanted with a small grain (maximum small grain seeding rate 10% of normal) are insurable.

Insurance shall attach to a crop following a cover crop when the cover crop meets the definition provided in the Basic Provisions, was planted within the last 12 months, and is managed and terminated according to NRCS Cover Crop Termination Guidelines. The Guidelines include information on cover crops and crop insurance, Good Farming Practices for cover crops, and termination information and exceptions, which can be found at <https://www.rma.usda.gov/en/Topics/Cover-Crops>.

- *11 Insurance shall not attach or be considered to have attached without a written agreement to a planted non-irrigated crop on acreage from which, in the same calendar year:

- 1) A perennial hay crop was harvested; or
- 2) A crop (other than a cover crop) reached the headed or budded stage prior to termination, regardless of the percentage of plants that reached the headed or budded stage;

Termination means growth has ended. To qualify for a written agreement, you must provide a minimum of the most recent three years of your double cropping actual production history for the crop in the county. A cover crop is one that meets the criteria outlined in the Insurance Availability section of these Special Provisions.

Yield Protection

In lieu of the definition of price election contained in the Basic Provisions, the price elections will equal the projected prices. For those types where the Dry Pea Revenue Endorsement offers coverage for price movement, the projected prices will be determined under the terms of the Dry Pea Revenue Endorsement and will be announced not later than the third business day of March. If a projected price cannot be determined as described in the Dry Pea Revenue Endorsement, the projected price will be determined by RMA and announced not later than the third business day of March.

Quality

- *13 In addition to section 13(d) of the Dry Pea Crop Provisions, for all types of dry peas (except the contract seed pea type), production from insurable acreage is determined by subtracting from gross production Total Dockage, Defects and Foreign Material resulting from insurable cause of loss during the insurance period.

If you elect to delay measurement of farm stored production as provided in the Basic Provisions, all samples of farm stored production used to determine insurable quality deficiencies must be obtained in accordance with this Quality Adjustment Statement, but not later than 60 days after the end of the insurance period (EOIP), otherwise such production will not be adjusted for quality. All samples obtained to test for substances or conditions injurious to human or animal health must be taken prior to production entering storage. The gross amount of production will be determined by us not later than 180 days after the EOIP. At the end of 180 days, the adjuster will measure the production as soon as possible so your claim can be completed and submitted not later than 30 days after the 180th day.
