General

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

Corn planted on acreage following a crop that has been prevented from being planted will not be considered a cover crop and will be considered a crop planted for harvest.

Insurance Availability

Insurance shall attach to a crop following a cover crop when the cover crop meets the definition provided in the Basic Provisions, was planted within the last 12 months, and is managed and terminated according to NRCS Cover Crop Termination Guidelines. The Guidelines include information on cover crops and crop insurance, Good Farming Practices for cover crops, and termination information and exceptions, which can be found at <https://www.rma.usda.gov/en/Topics/Cover-Crops>.

Special Provisions 2026 and Succeeding Crop Years

Year: 2026

Commodity: Rye (0094)

Underwritten by: CNA

Date: 6/17/2025

Plan: Yield Protection (01)

County: Walworth (129)

Revenue Protection (02)

Revenue Prot with Harvest Price Exclusion (03)

- *4 Acreage planted to the approved high yielding rye varieties listed below may be insurable under the winter type for the 2025 crop year or producers may request a higher yield by an unrated practice/type (TP) type written agreement under a new high yielding type. For the 2026 crop year moving forward, all approved high yielding varieties will transition to the high yielding type and be insurable only by written agreement. The high yielding characteristic of these varieties will be considered; higher yield offers may be approved as part of the written agreement. Written agreement requests must contain documentation (e.g. seed purchase receipt) of the high yielding variety(ies) the producer is planting.

Approved High Yielding Winter Varieties:

Bono, Serafino, Tayo, Receptor, Brasetto, SU Performer, SU Cossani; additional hybrid varieties will be considered with at least two years of trial yield data results and an approved agricultural expert recommendations as required by the Regional Office.

Quality

GENERAL STATEMENTS:

Yield will be determined by the number of bushels of grain produced per acre, based on the number of acres planted to the approved high yielding varieties listed below.

Yield will be determined by the number of bushels of grain produced per acre, based on the number of acres planted to the approved high yielding varieties listed below. The yield will be determined by the number of bushels of grain produced per acre, based on the number of acres planted to the approved high yielding varieties listed below. The yield will be determined by the number of bushels of grain produced per acre, based on the number of acres planted to the approved high yielding varieties listed below.

Unit: 1000 bushels
County: Walworth (129)

- c. If the applicable quality deficiency is shown in the chart below, the applicable DFs shown in the chart below added to the applicable DFs included in sections A or B3 above.

DFs for Vomitoxin:

Vomitoxin Range	DF
0.1 to 10.0 ppm	See Quality Adjustment Tab for Discount Factors
10.1 ppm & above	See C3 below

2. If the level of any substance or condition is less than the maximum allowable, adjust the production in the following manner:
 - a. If the level of any substance or condition is less than the maximum allowable, the DF will be:
 - i. If the level of any substance or condition is less than the maximum allowable, the DF will be the sum of all insurable quality deficiencies, and that value divided by the local market price.
 - ii. If the level of any substance or condition is less than the maximum allowable, the DF will be the sum of all insurable quality deficiencies, and that value divided by the local market price, plus the applicable DFs included in sections A or B2 above.
 - iii. If the level of any substance or condition is less than the maximum allowable, the DF will be the sum of all insurable quality deficiencies, and that value divided by the local market price, plus the applicable DFs included in sections A or B2 above.
 - iv. If the level of any substance or condition is less than the maximum allowable, the DF will be the sum of all insurable quality deficiencies, and that value divided by the local market price, plus the applicable DFs included in sections A, or B2 above.
 - v. For unsold production containing all other mycotoxins or substances or conditions 60 days after the calendar date for the EOIP, the DFs will be .500, plus the applicable DFs included in sections A or B2 above.
 - b. If on the date of final adjustment for the unit, the unsold production is in on-farm storage, is in commercial storage but was not transported directly from the field, was fed or utilized in any other manner, was in on-farm storage and has been sold, or was sold to other than a disinterested third party:
 - i. If the level of any substance or condition is less than the maximum allowable, the DF will be the sum of all insurable quality deficiencies, and that value divided by the local market price, plus the applicable DFs included in sections A or B2 above.
 - ii. If the level of any substance or condition is less than the maximum allowable, the DF will be the sum of all insurable quality deficiencies, and that value divided by the local market price, plus the applicable DFs included in sections A or B2 above.
 - iii. If the level of any substance or condition is less than the maximum allowable, the DF will be the sum of all insurable quality deficiencies, and that value divided by the local market price, plus the applicable DFs included in sections A or B2 above.

DFs for Aflatoxin:

Aflatoxin Range	DF
0.0 - 100.0 ppb	See Quality Adjustment Tab for Discount Factors
300.1 ppb & above	See C3 below

3. For production that has an Aflatoxin level in excess of 300 ppb, a Vomitoxin level in excess of 10 ppm, or any other substances or conditions qualifying under Section C having a level exceeding the maximum amount allowed or when the edible portion of a crop is exposed to flood waters, a claim will not be allowed for you to submit your claim for indemnity, following the date we determine the production was sold, fed, utilized in any other manner, or destroyed
- a. The RIV applied by the buyer due to all insurable quality deficiencies, and that value divided by the local market price for production sold to a disinterested third party; or
- b. For production containing Aflatoxin or any other substances or conditions (except for production containing Vomitoxin as detailed in C3 a above), the DF will be:
- c. If production qualifying under Section C3 remains unsold, or is not destroyed, more than 365 days after the calendar date for the end of insurance period, such production will not be adjusted for any quality deficiencies listed in Section C.

SECTION D - ZERO MARKET VALUE PRODUCTION
