### Statement

#### General

Contact your agent regarding possible premium discounts, options, and/or additional coverage that may be available.

#### Price

If a contract price is available as shown in the actuarial documents, you may elect to have your price election determined in accordance with the Contract Price Addendum (CPA). If the crop provisions or special provisions provide a method to determine a contract price your price election will be determined in accordance with the crop provisions or special provisions and the CPA does not apply.

#### Insurance Availability

In addition to the definition of planted acreage in section 1 of the Cultivated Wild Rice Crop Provisions, the application of seed by broadcast seeding into a controlled flood is insurable. It is defined as distributing wild rice seed onto a prepared seedbed that has been intentionally covered to a proper depth by water. The water must be free of movement and be completely contained on the acreage by properly constructed levees and gates.

Insurance shall attach to a crop following a cover crop when the cover crop meets the definition provided in the Basic Provisions, was planted within the last 12 months, and is managed and terminated according to NRCS Cover Crop Termination Guidelines. The Guidelines include information on cover crops and crop insurance, Good Farming Practices for cover crops, and termination information and exceptions, which can be found at <https://www.rma.usda.gov/en/Topics/Cover-Crops>.

#### Quality

In the absence of a recovery percentage determination by an approved laboratory, the recovery percentage for use in converting green weight cultivated wild rice to finished weight will be: Recovery percentage=.5000.
